

Little Panthers Preschool 4-Year-Old Half Day

This program will prepare your child for kindergarten through a proven academic curriculum that promotes learning in reading, vocabulary, math, science and handwriting through structure and play.

Reading and vocabulary are key to a student's success. Your child will learn letters and their sounds using guided activities, story time and songs. This is the foundation in building a strong reader. One of our goals is to make sure your child loves to read!

Another goal is to have them learn basic math skills. Number recognition and identification is instrumental as students begin to learn basic math. Your child will be introduced to a range of math concepts from practicing counting, addition and subtraction to creating simple patterns. This foundation will have them ready to move on to higher math concepts taught in kindergarten.

Your child's natural curiosity will flourish in science. They will learn about weather, dinosaurs, their amazing bodies and other lessons through stories, projects and group activities.

By using a series of fun, interactive lessons your child will be taught to write the letters of the alphabet, their name and number formation.

4 Year Old Half Day Program will be offered Monday – Thursday, 12:30 pm – 3:30 pm.
